BECRET/BECURITY INFORMATION	
-2-	

on the roces off as weste, while the hydrogen, with a high percentage of lentering a tent, is circulated back through the catalyst cells from the last cell to the first in the direction counter to the flow of the vater. About 25% of MOH is added to the electrolytic cell as an electrolyte. The mater obtained from the electrolytic cell, after being family electrolyzed, is 99-100% heavy water
